Optima Asset Maintenance Solutions named Innowera's UK Partner

Optima Asset Maintenance Solutions, a maintenance engineering consultancy based in Aberdeen, Scotland and Innowera LLC based in Dallas, Texas today announced partnership for the UK Market.

The channel partnership will allow Optima to offer their customers who use SAP as their ERP system a complete Asset Data Management solution. Asset data information that is collated in Microsoft Excel can be quickly and efficiently uploaded to SAP using Innowera's Process Runner. This capability is essential for an agile organization as changes to the asset register can be processed at source using readymade templates and uploaded to SAP at the end of a validation and verification process. Innowera's innovative Easy Workflow solution can facilitate the review process. The Easy Workflow solution provides a complete workflow system that works from within Microsoft Excel, and offers users a lot of flexibility to manage the process while retaining auditability and accountability.

A key strength of Process Runner is that it works without needing to modify or install anything in SAP while it automatically complies with existing SAP security. Users can use various data sources such as Microsoft Excel, SQL, Oracle, Sybase, DB2, Access, and SharePoint to perform drag-and-drop operation between these sources and SAP. For forward-looking organizations, Process Runner can be the ideal tool for SAP data cleansing, monitoring, downloading, and uploading. The solution can also be used to load test data during process simulation or training preparation.

Furthermore, other products within the Innowera portfolio which include Innowera Control Panel, Dashboard, and Enterprise Share applications provide a complete set of functionality for SAP data management with enterprise-grade governance, reporting, sharing, and collaboration for an agile enterprise. Innowera's Process Runner dramatically reduces on-going costs and enables SAP users by automating day-to-day data creation and maintenance for your SAP systems without needing to write any programs.

Together through this new partnership Optima and Innowera solutions will enable SAP users at all level by simplifying and automating transactions and processes and providing them higher quality data and making data ready sooner for business.

About Optima

Established in 2015, Optima Asset Maintenance Solutions undertake maintenance/spares strategy development/optimisation, safety critical element alignment and asset register builds. We specialise in strategic pragmatic asset management solutions that deliver sustainable cost savings.
